Target-macro mean (0–1)
Target-macro mean and target-bootstrap 95% CI
Infrastructure identification bounds — NOT a CI
A: all attempts; infra: missing infrastructure outcomes; n: target clusters with this metric.
Rule replay ≠ experimental synthesis or common-forward audit. 3D coverage = available successful output slots / cap 3.
Descriptive unadjusted CIs; overlap is not a test. Post hoc presentation; repeated split targets are not independent cohorts.
